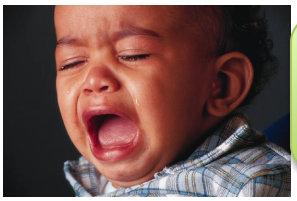
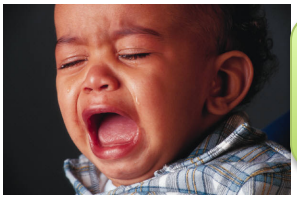
what's wrong?!?



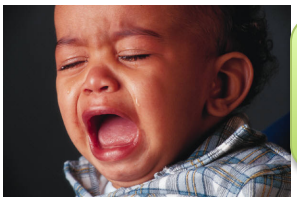
omg. i just spent, like, 200 hours on a project and then my computer crashed

can't u just pull it off your mirror?



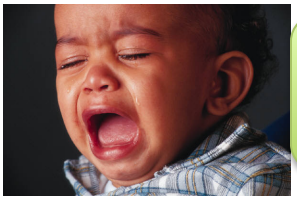
i have no idea what ur talking about. what does a mirror have to do with it?

u don't mirror your files?



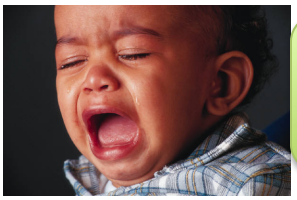
seriously. ur talking like ur crazy.

a mirror is an exact duplicate of your files, folders, everything that is stored remotely



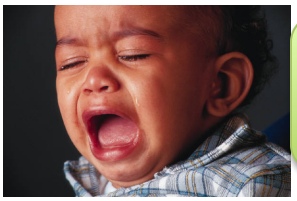
???

i always keep a mirror for this exact reason. so if my computer crashes, i can get my files.



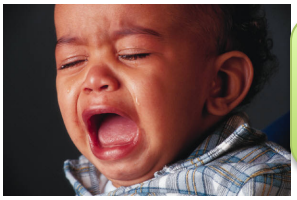
y didn't i know about this?

i don't know. maybe u skipped class that day?



so i should definitely have a mirror. check.

make sure u do a backup too tho.

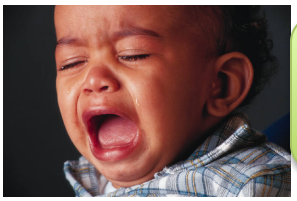


i'm confused. i thought the mirror was a backup.

well, some people call it that, but they r different. a backup saves everything…

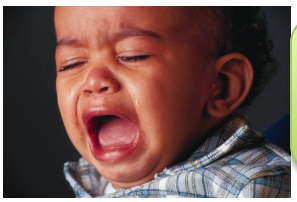
but a mirror copies your machine, so if you delete something, it deletes it on the mirror.

so if u delete something accidentally, a mirror won't help, but a backup will.



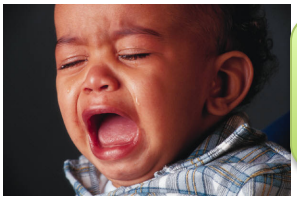
k. so i need both. so like a flash drive?

u will prob need more than that, like an external drive. i have two, one stays home and one is in my dorm.



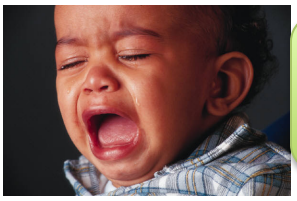
y 2?

well, if something happens to one, i have the other.



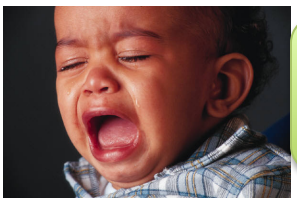
so your backup has a backup?

yep



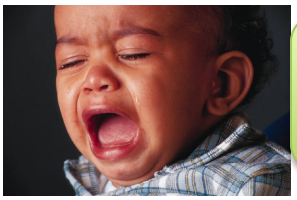
that seems like a lot of work

it takes me about 15 minutes and I do it once a week. how much time did u say you just lost?



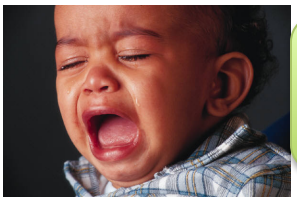
i see your point.

i thought u might



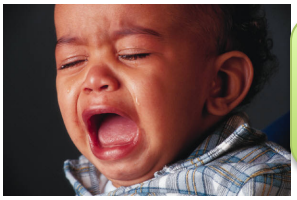
well, i have to get started recreating that project...gotta go

make sure you go to best buy first to get a backup drive!



rude

LMAO



u would
